

Legislative Deadline Aftermath

By: Martin Paris, NCA Executive Director

I hope everyone is enjoying spring so far. We recently reached the first two milestones of the Nevada Legislative Session. Unless a bill had received an exemption, on April 9th, any bills that were not passed out of the committee to which they were assigned effectively died. On April 20th, any bills that failed to be passed by the First House are also no longer under consideration. The deadlines helped bring a little bit of clarity to what has otherwise been a messy and dysfunctional legislative session thus far. About one-third of the more than 900 pieces of legislation were eliminated as the result of the first deadline. While there is plenty of more work to be done before the session ends on May 30th, several bills we had our eye on fell victim to the deadlines.

Of note was AB 354 introduced by the Nevada Division of Water Resources. AB 354 would have established a water banking system in Nevada that appeared to be more of a leasing program than anything. It would have allowed agricultural water to be leased out for other purposes and would have also allowed water to be transferred out its basin of origin. The Division of Water Resources provided an amendment to the bill which made several needed changes, however, this amendment came just hours prior to the hearing on the bill. The Nevada Cattlemen's Association testified in opposition of the bill due to several unknowns associated with the new proposal. The Assembly Natural Resources Committee felt the same and did not take action on the bill prior to the deadline.

Another bill brought forward by the Nevada Division of Water Resources that did not survive the first deadline was AB 5. The bill proposed to limit what types of water related decisions could be appealed through the judicial process by adding undefined terms such as "formal" and "final determination". The addition of these vague terms brought into question the ability to challenge interim orders, temporary permits, etc.

The Nevada Cattlemen's Association also testified in support of SJR 3 which requests that Congress provide the necessary funding for the Bureau of Land

Management to reach Appropriate Management Levels (AML) for wild horses and burros within 6 years. However, an amended version supported by horse advocacy groups surfaced during the Senate

Natural Resources Committee work session and is what was ultimately voted on and passed out of committee. This amended version essentially gutted the original resolution, leaving NCA opposed to the new

—Aftermath continued on page 3—

PRESIDENT'S PERSPECTIVE

Tom Barnes, President, Nevada Cattlemen's Association

I hope everyone is getting their spring work done and that it is going smoothly.

This legislative session continues to be an interesting one with bills being changed and amendments occurring within hours of a hearing. It has kept our legislative team on their toes but they are staying abreast of what's happening.

We are also monitoring the environmental policies that are being imposed by the current presidential administration. The 30 by 30 executive order is one in particular we are keeping a watchful eye on. It calls for the protection of 30 percent of land and water by 2030. What is meant by protection is what is extremely concerning.

A few weeks ago, a judge issued a petition for stay blocking an outcome based grazing program on the Winecup Gamble in the name of sage grouse. This project would have created flexibility, adaptability, and cutting-edge management systems with widespread range improvements. Many people ranging from agency personnel to private partners put a tre-

mendous amount of time and effort into getting this project off the ground. It had the potential to have widespread benefits to rangeland health and grazing practices throughout the west. This ruling was very disappointing to say the least.

In a true illustration of leadership, State BLM Director Raby sent a letter out to his staff and others with a vested interest in the project. He acknowledged all the work that had been done and the disappointment associated with the ruling while inspiring those to keep doing what they do best.

His words were referring to this subject matter but as I read his letter, it occurred to me that so much of what he said could be applied to the many challenges and setbacks we face as ranchers. I'll share with you a couple excerpts

"Nevada is tough. Nevada is hard.
It's hard and that's why we're here.
If we wanted things easy,
we would be somewhere else.
But that's not our nature..."

— State BLM Director Raby —

from his letter. "Nevada is tough. Nevada is hard. It's hard and that's why we're here. If we wanted things easy, we would be somewhere else. But that's not our nature.....We will learn from this, chart a path forward and be better for it in the long run." Thank you Director Raby.

Legislative Deadline Aftermath: *Continued from page 1*

watered-down language. However, the new version was not voted on by the Senate prior to the April 20th deadline.

While the above-mentioned bills can be taken off the list, NCA continues to engage on several bills that survived both deadlines. Of these, SB 54 remains a top priority. SB 54 proposes to drastically change the current representation on the Nevada Board of Agriculture by eliminating two of the three positions currently represented by the cattle industry. One of these positions would be eliminated entirely while the other would be reclassified as livestock production instead of cattle production. SB 54 passed out of the Nevada State Senate on April 14th in a 12 to 9 vote and now will head to the Assembly Natural Resources Committee. NCA will shift our focus to the Assembly now in an effort to kill the bill.

SB 287 proposes to add the University of Nevada, Las Vegas (UNLV) and the Desert Research Institute (DRI) as land grant institutions in the state. The Nevada Cattlemen's Association opposed this bill during its hearing citing the dilution of resources that would occur by splitting the already limited funding currently available to the University of Ne-

vada, Reno (UNR). SB 287 was one of the bills that received an exemption from the deadlines and has been re-referred to the Committee on Finance.

Lastly, NCA will be supporting SB 94 which aims to clarify that a private property owner can place an unlocked gate across a certain public road without it being considered a public nuisance. This bill is in response to SB 316 passed last session which made it a public nuisance for any person to prevent or obstruct free passage on public roads that cross through private property. The way the statute currently reads "fencing or otherwise enclosing" a public road that passes through private property constitutes a public nuisance. The current statute has been interpreted by some to mean that a private landowner cannot have a fence with gate at all, even if unlocked.

These are just some highlights of the proposals being discussed this session. NCA continues to engage on several others as well. As always, feel free to give the NCA office a call to provide input on any bills that may be of benefit or concern to your operation.

Survey Seeks to Help Farmers and Ranchers with High-Stress Environment

University of Nevada, Reno researchers participate in multistate program to help producers in the West

RENO, NV – The nation’s farmers and ranchers experience especially high levels of stress. This can lead to higher incidence of, for example, mental health issues, cardiovascular issues and high blood pressure, detrimental behaviors that lead to chronic disease, substance abuse, and even suicide. Researchers at the University of Nevada, Reno; Colorado State University; and Montana State University have designed a survey that is now available online for producers to provide researchers with more information about the various stressors that farmers and ranchers are facing, as well as what can be done to help them and their families.

Submitted Photo

Lindsay Chichester, University of Nevada, Reno assistant professor and Extension educator in Douglas County, is one of the researchers who designed the survey, which is part of a program designed to provide assistance for producers in the West. She says that a variety of factors make farming and ranching for a living especially stressful, including unstable finances and product price fluctuations, carrying the pressure of expectations to keep a multigenerational ranch or farm running, injury, chronic/acute illness, droughts, floods, pests that damage or destroy crops, and recent COVID-related additional stressors.

Known as “Dr. Lindsay” to many in the country’s agriculture industry and on social media, Chichester understands the ups and downs of farming and ranch life, growing up on a cattle and sheep ranch in northern California, before going on to earn her doctorate in agricultural sciences. She says producers often don’t have good “help-seeking skills.”

“We tend to be stoic, and not want to admit we need help, not even to ourselves,” she said.

But, according to Chichester’s colleague and partner in designing the survey, Brenda Freeman, “Stress is debilitating – it affects our bodies and our health.”

Freeman, a professor of counseling and educational psychology and Extension specialist at the University, has seen the havoc stress can wreak in individuals in her more than 30 years of providing counseling.

“People think it’s a lightweight topic,” she said. “But, they are missing the depth of the multiple ways stress will impact their work, their business, their health and their families. It seeps into all aspects of their lives.”

In fact, with the increased chronic stress that agricultural producers are experiencing, the suicide rate among farmers and ranchers is higher than it is in

the general population. The agriculture industry group was one of five industry groups identified in a study by the Centers for Disease Control and Prevention with suicide rates significantly higher than other major industry groups.

“Overall farming and ranching has a suicide rate six times higher than many other occupations, with 90 deaths for every 100,000,” Freeman said.

To help, Freeman and Chichester, along with researchers at Colorado State and Montana State, have designed the online survey for producers, called the Western Region Farm and Ranch Stress Assistance Survey. The survey is part of the Western Regional Ag-

ricultural Stress Assistance Program, of which the University of Nevada, Reno is one of 10 lead agencies. The program seeks to help producers in 13 Western states and four territories, and is funded by a USDA Farm and Ranch Stress Assistance Network grant.

The survey is meant to find out more about the specific stresses faced by farmers and ranchers, what help they need, and how they would most likely seek help and access it. Then, the researchers hope to use this information to create programs and resources to help the producers.

“It’s not just a matter of having compassion for our ag producers, which, of course, we do,” said Chichester. “It’s also a matter of food security. As a nation, we need our ag producers. We can’t afford to rely on other nations for our food supply. We need to make sure our ag producers are getting the resources they need to stay healthy, and to stay in business.”

Freeman and Chichester hope to get at least 100 Nevada producers to participate in the online survey by the end of May. And, while this survey is intended for producers, meaning farm or ranch owners or managers, a separate survey for farm and ranch workers will be designed and conducted as part of the program next spring.

For links to the survey in both English and Spanish, go to <https://extension.unr.edu/stress-survey/>. For more information on the survey or on assistance available to help producers experiencing stress, contact Chichester at lichichester@unr.edu or 775-782-9960, or Freeman at brendafreeman@unr.edu or 775-682-9353. Producers needing immediate help should call the Farm Aid hotline, 1-800-FARM-AID; or the National Suicide Prevention Lifeline, 1-800-273-8255.

Bureau of Land Management Seeks Nominations for Nevada's Resource Advisory Councils

RENO, Nev. – The Bureau of Land Management is seeking public nominations for the Mojave Southern Great Basin and Sierra Front Northern Great Basin Resource Advisory Councils (RAC). These citizen-based councils assist in the development of recommendations that address public land management issues. The nomination period is open for 45 days.

The BLM maintains RACs chartered under the Federal Advisory Committee Act (FACA) and the Federal Policy and Land Management Act (FLPMA) across the West. The RACs consist of 15 members from interests in local communities as a means of gaining expert advice, ideas, and diverse opinions on issues including land use planning, fire management, off-highway vehicle use, recreation, oil and gas exploration, noxious weed management, grazing issues, and wild horse and burro herd management issues.

The Mojave Southern Great Basin RAC consists of 15 members from diverse interests in local communities, including ranchers, energy and mineral development representatives, recreationists, environmental groups, State and local government officials, and the public at large. It covers the areas managed by the Battle Mountain, Ely and Southern Nevada Districts and the Designated Federal Official is rotated among the District Managers for the three districts. For more information on the Mojave Southern Great Basin RAC contact Kirsten Cannon at k1cannon@blm.gov or 702-515-5057.

The Sierra Front Northern Great Basin RAC consists of 15 members from diverse interests in local communities, including ranchers, energy and mineral development representatives, recreationists, environmental groups, State and local government officials, and the public at large. It covers the areas managed by the Carson City, Elko and Winnemucca Districts and the Designated Federal Official is rotated among the District Managers for the three districts. For more information about the Sierra Front Northern Great Basin RAC contact Lisa Ross, Carson City District Office, lross@blm.gov, (775) 885-6107.

“We look forward to reengaging with the RACs and moving forward with new members and ideas,” said Nevada State Director Jon Raby. “I encourage people from across the state to apply to ensure we have representation from all com-

These citizen-based councils assist in the development of recommendations that address public land management issues.

munities and user groups who have an interest in their public lands.”

Individuals may nominate themselves or others to serve on the RAC. Nominees, who must be residents of Nevada, will be reviewed based on their training, education, and knowledge of the RAC's geographic area. Nominees should also demonstrate a commitment to consensus building and collaborative decision-making. Nominations must include a completed application, a letter(s) of reference, and any other information that addresses the nominee's qualifications. The application form can be downloaded at https://www.blm.gov/sites/blm.gov/files/1120-019_0.pdf.

Nominations are being accepted for the following categories:

- Category One – Representatives of organizations associated with energy/mineral development; Federal grazing permit holders; the timber industry; transportation or rights-of-way; off-highway vehicles users; and commercial and developed outdoor recreation.
- Category Two – Representatives of archeological and historic organizations; dispersed recreation users; wild horse and burro organizations; and nationally or regionally-recognized environmental organizations.
- Category Three – Representatives of State, county, or local elected office; Indian tribes located within or adjacent to the area for which the RAC is organized; academicians employed in natural resource management or natural sciences; employees of a State agency responsible for management of natural resources; and the public at large.

As published in a notice in the *Federal Register*, the BLM will consider nominations for 45 days until June 14, 2021. For more information, please contact Rudy Evenson, BLM Nevada State Office, phone: 775-861-6411; email revenson@blm.gov. Persons who use a telecommunications device for the deaf may call the Federal Relay Service (FRS) at 1-800-877-8339 to leave a message or question for the above individual. The FRS is available 24 hours a day, seven days a week. Replies are provided during normal business hours.

Announcing the new vaccine from Hygieia Labs:
**Your Foothold Against
Foothill Abortion.**

Costing the industry more than \$10 million annually, Foothill Abortion — formally known as Epizootic Bovine Abortion, or EBA — has robbed profits from ranchers for almost 100 years as the leading cause of calf loss in affected areas of the Western United States.

Until now.

After years in development and testing, the new Foothill Abortion Vaccine is available from Hygieia Biological Laboratories. The Foothill Abortion Vaccine has been shown to protect more than 95% of animals from the disease when administered as directed. Administration is safe, simple and proven to give your heifers a strong start for greater productivity.

Protect your investment and promote your profitability. Ask your local veterinarian if the Foothill Abortion Vaccine is right for your herd, or contact Hygieia Labs to learn more.

Contact Jenna Chandler at Hygieia Labs for additional information.

Avoid Communication Drought During Dry Years

By Niels Hansen

Like many of you, I received the dreaded, but expected, drought letter from the BLM or Forest Service not too long ago. Content of the letters vary from state to state, but all of the letters tell you the range conditions are dry and there may be a need to make some kind of

possibility of emergency water projects. We looked at temporary watering sites using hauling and pipelines to disperse the livestock and wildlife and keep the range healthy. Everyone agreed on the value of the effort and the proposed goals, but when looking to put those plans into action, we ran into some road blocks.

The Executive Order President Biden signed his first day in office on oil & gas development has been expanded to cover all surface disturbing activities. This would, of course, impact things that ranchers and agencies want to do in order to alleviate drought concerns – both for livestock and for wildlife. The Public Lands Council has been communicating with Department of Interior (DOI) in an effort to get clarification on Department's intention and share real, on-the-ground impacts of broad decisions like this. We all know that all too often, something looks like it will be good on paper, but doesn't work in practice or has unintended consequences. After visiting with some ranchers in other areas, it became clear that internally, DOI hasn't given a lot of clear guidance on how to move projects forward in a timely manner,

emergency or otherwise.

Whether you're assessing the potential for an emergency water haul or discussing ongoing monitoring, I urge you to contact your range person and discuss your situation. By working together to make a plan for this year, you will be able to get your thoughts and needs for a dry year on the table. Learn what obstacles or issues BLM or the Forest Service sees that may slow or prohibit you from doing what you need to protect our livestock and the land. If you are in a Herd Management Area, ask BLM to implement a water hauling program for the feral horses. Whatever the issue, whatever the timing, stay in contact with your range professional.

Dry years are always tough to deal with, but working together and keeping conversation flowing is the best way to decrease stress, improve outcomes, and set the stage for the productive years to come.

Niels Hansen is a third generation rancher from Rawlins and currently serves as president of the Public Lands Council. He has served as chairman of the Wyoming State Grazing Board and president of the Wyoming Stock Growers Association.

adjustment in 2021 grazing plans. As we head into spring and summer pasture where pastures are dry and situations change quickly, it is important to have good, open communication with your range professionals in the Federal agencies. I am sure most if not all of you have received a letter informing you of that.

On our ranch, it took two range tours, multiple calls, and countless emails to move into 2021 with an updated grazing plan that everyone is comfortable with. While drought raises a variety of scenarios that require additional planning, a few things come to the head of the list. For us, it was planning for the

USDA Seeks Nominees for the Cattlemen's Beef Promotion and Research Board

The U.S. Department of Agriculture (USDA) Agricultural Marketing Service (AMS) is seeking nominees for the Cattlemen's Beef Promotion and Research Board. Nominations are due June 6, 2021, for 32 producer and three importer seats. Appointed members will serve three-year terms beginning February 2022 and ending February 2025.

Vacancies for producer and importer member positions are available in Arizona, Colorado, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Mexico, North Carolina, Oklahoma, South Dakota, Tennessee, Texas, Utah, Wisconsin, Wyoming, Mid-Atlantic Unit (South Carolina and West Virginia), Northeast Unit

(Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, Rhode Island, and Vermont), Southwest Unit (California and Nevada) and Importer Unit.

Any beef producer in the United States who owns cattle or any importer that imports cattle or beef may be nominated. Producers and importers must be nominated by a USDA certified producer organization and submit a completed application. USDA will select appointees from the nominated producers and importers.

Nomination forms and a list of certified producer organizations in each state or unit are available on the AMS Cattlemen's Beef Board webpage, <https://www.ams.usda.gov/rules-regulations/research-promotion/beef>.

Beef Promotion and Research Act of 1985 and is composed of 101 members representing 34 separate states, four units of geographically grouped states, and one importer unit.

For more information, contact Kahl Sesker at (202) 253-8253 or Kahl.Sesker@usda.gov.

AMS policy is that the diversity of the board should reflect the diversity of their industries in experience of members, methods of production and distribution, marketing strategies, and other distinguishing factors that will bring different perspectives and ideas to the table. When submitting nominations, the industry must consider the diversity of the population served and the knowledge, skills, and abilities of the members to serve a diverse population.

Since 1966, Congress has authorized industry-funded research and promotion boards to provide a framework for agricultural industries to pool resources and combine efforts to develop new markets, strengthen existing markets and conduct important research and promotion activities. AMS provides oversight to 22 boards. The oversight ensures fiscal accountability and program integrity and is paid for by industry assessments.

Study Confirms US Beef Industry is the Most Sustainable in the World

WASHINGTON (April 5, 2021) – A research paper released today (<https://onlinelibrary.wiley.com/doi/full/10.1111/gcb.15509?af=R>) confirmed U.S. beef production is the most sustainable production system in the world, a fact long understood by America’s cattle producers, who between the 1960s and 2018, reduced the carbon footprint of the industry by 40 percent while producing 66 percent more beef.

“We already know a growing global population will require and demand high-quality food, which means we need ruminant animals, like beef cattle, to help make more protein with fewer resources,” said NCBA president and Kansas cattleman, Jerry Bohn. “Cattle generate more protein for the human food supply than would exist without them because their unique digestive system allows them to convert human-inedible plants, like grass, into high-quality protein.”

Although the study’s abstract disingenuously advocates for decreased beef consumption, the paper itself repeatedly points out that the advantages of the U.S. cattle and beef production model far outweigh the impacts. The U.S. has been a global leader with the lowest emissions intensity in the world for the past 25 years, producing just 2 percent of U.S. greenhouse gas emissions, or 0.5 percent of global GHG emissions.

The study examined livestock lifecycle assessments (LCAs) from across the globe to reach its conclusions and pointed out that there is significant room for improvement of global livestock production practices. While it laid out many opportunities for improvement, it also recognized the work

already done by the U.S. cattle industry to become the leader in sustainable beef production. Thanks to early adoption of innovative grazing practices combined with advances in cattle breeding and nutrition, U.S. producers have already employed many of the suggested practices that the study suggests employing around the world.

While the content of the study repeatedly confirms the U.S. as the leader in sustainable beef and cattle production, NCBA was disappointed to see a statement in the abstract that advocated for a reduction in beef consumption. This statement is not only unfounded but is inappropriate to include in a summary of work that consistently validates American conservation and management practices. Cattle production protects open space, guards against catastrophic wildfire, and protects wildlife habitat across the country. Those benefits, and the practices that underpin them in the United States, further confirm the country’s role as a global leader.

“Beef and cattle production is a critical part of our country’s identity as a global leader in sustainable beef production, but also in our long-held principle that economic, environmental, and community-based sustainability will result in widespread benefits,” said Bohn. “U.S. farmers and ranchers are the best in the world when it comes to producing safe, wholesome and sustainable high-quality beef for American families, and doing it with the smallest possible footprint and we’re committed to continuing on that path of improvement.”

Summertime Beef Meatloaf

Conceived by cattle farmer and blogger, Anne Burkholder, this meatloaf is different than the rest with an unexpected twist of herb stuffing mix and tomatoes on the inside.

www.beefitswhatsfordinner.com

Ingredients:

- 2 pounds Ground Beef (93% lean or leaner)
- 2/3 cup seasoned dry bread crumbs
- 2 large eggs
- 1-1/2 teaspoons freshly ground black pepper
- 1 cup savory herb stuffing mix
- 2 large sliced tomatoes

Cooking:

1. Preheat oven to 350°F. Line rack on broiler pan with aluminum foil. Combine Ground Beef, bread crumbs, eggs and pepper in medium mixing bowl, mixing gently but thoroughly. Shape half of beef mixture into 8 by 4-1/2-inch loaf on prepared rack. Top beef with stuffing mix and half the tomatoes; gently pressing into beef. Top with remaining beef mixture, pressing to completely cover stuffing and tomatoes. Seal edges of meatloaf. Top meatloaf with remaining tomato slices.
2. Bake uncovered in 350°F oven 1-1/2 hours or until instant-read thermometer inserted into center registers 155°F. Turn broiler to high. Broil meatloaf for 5 minutes or until tomatoes are caramelized and instant-read thermometer registers 160°F. Let stand 10 minutes before cutting.

Nutrition information per serving: 257 Calories; 83.7 Calories from fat; 9.3g Total Fat (3.5 g Saturated Fat; 3.5 g Monounsaturated Fat;) 121 mg Cholesterol; 305 mg Sodium; 15 g Total Carbohydrate; 1.7 g Dietary Fiber; 27 g Protein; 3.7 mg Iron; 5.5 mg NE Niacin; 0.4 mg Vitamin B6; 2.3 mcg Vitamin B12; 6.2 mg Zinc; 25.1 mcg Selenium; 115.6 mg Choline.

Details Shaping Up for Elko Stockmanship & Stewardship Event

The Elko Stockmanship & Stewardship (S&S) program, a nation-wide educational tour that brings world-renowned clinicians to several locations each year for top-notch learning opportunities, is gearing up to be an event not to be missed.

The event is slated for July 16 and 17 at the Elko County Fairgrounds.

Producers from Nevada and other western states will be able to enjoy a unique educational experience featuring low-stress cattle handling demonstrations, Beef Quality Assurance (BQA) educational sessions, industry updates, and cutting-edge operation techniques specific to western producers. The event will also provide opportunities to network with fellow producers and partake in hands-on demonstrations from stockmanship experts Curt Pate, Ron Gill and Dean Fish.

Specific topics taking shape include low-stress cattle handling techniques on horseback and on foot, as well as out on the open range; a stock dog demonstration; chute-side vaccination tips and demonstrations; BQA certification; and several other educational topics unique to the western

cattle producer.

The Elko Stockmanship & Stewardship event is unique in that it is also being held in conjunction with the American National CattleWomen's WIRED (Women in Ranching Education and Development), allowing cattlemen and women from across the west to benefit from high-quality education on important topics that both events offer.

The Stockmanship & Stewardship program is sponsored by the National Cattlemen's Beef Association (NCBA), a contractor to the Beef Checkoff, Merck Animal Health, the Nevada Beef Council, and the Beef Checkoff-funded National Beef Quality Assurance program.

Registration is expected to launch in late spring, and will be available at stockmanshipandstewardship.org. Click on the Elko event for details, an event schedule, and registration options. Because this is a joint effort between the WIRED and S&S programs, producers will be able to register for either or both events on the site.

We hope producers from all over Nevada will join us for this exciting and educational event!

Testimonials from Previous S&S Events*

“An excellent event. Enjoyed the format and the participation. Thank you to everyone that put the program together. Great Job.”

“Good program; I appreciated the opportunity to get my BQA certification at the course.”

“While I have had experience with most of the topics covered, it was great to hear the speakers talk and give a good overview of industry practices.”

*Additional testimonials and event details available at www.stockmanshipandstewardship.org.

PASTURE FIRE INSURANCE AVAILABLE THROUGH WSR INSURANCE

WSR Insurance Services (WSR), is excited to announce the availability of pasture fire coverage for all Western states. **WSR can insure BLM, Forest Service, and state leases.**

Policies must be purchased by June 1, 2021 and will run through December 31, 2021. **Note: There is a 2-week lag time between policy submission and start of coverage.**

EXAMPLE FOR A NEVADA FIRE POLICY

50,000 acres @ \$10 per acre coverage = \$500,000 in protection

\$500,000 in protection X 1.5% for premium = \$7,500 premium cost

Fire event occurs burning 30,000 acres of the 50,000 covered, policy issues an indemnity of \$300,000 **minus** the deductible of \$100 = \$299,900 indemnity issued

PASTURE FIRE INSURANCE RATES FOR WESTERN STATES

<i>Approved States</i>	<i>Max Coverage per Acre</i>	<i>Cost per \$100 of Coverage</i>
AZ, NV, UT	\$10	\$1.50
NE, KS	\$20	\$1.25
CO, NM, OK, TX	\$20	\$1.50
CA	\$20	\$2.50
MT	\$30	\$1.00
SD	\$30	\$1.25
ND, WY	\$30	\$1.50
ID, OR	\$30	\$2.00
WA	\$30	\$2.10
